Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/820,973

Applicant(s)

BRAUN ET AL

Examiner

Eric Wong

Art Unit

2883

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to ^{Re Issue} communication(s) filed on 29 March 2001.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-85 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-85 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 29 March 2001 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date 0702, 0301, 0802, 0602, 1002, 1202, 0603, 0404, 0904
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____

DETAILED ACTION

Reissue Applications

1. The present application is a reissue of United States Patent 5,898,801 which issued on April 27, 1999, and which matured from United States Patent Application Serial Number 09/014079, filed January 29, 1998.
2. The sixteen (16) sheets of drawings filed with this application on March 29, 2001, are acceptable.
3. Applicant's cooperation is requested in correcting any previously undiscovered errors of which applicant may become aware in the specification.
4. This application is acceptable under 37 CFR 1.172(a) as the assignee has established its ownership interest in the patent for which reissue is being requested.
5. This application is objected to because the reissue application was filed without the required offer to surrender the original patent or, if the original patent is lost or inaccessible, a statement to that effect. See 37 CFR 1.178.
6. The reissue oath/declaration filed with this application is acceptable under 37 CFP 1.63 and 37 CFR 1.175 as specific changes, differences from original claims or amendments to the claims are identified with the reissue oath/declaration.

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claims 1-4, 6, and 9-36, 41-42, 51-55 and 58-85 are rejected under 35 U.S.C. 103(a) as being unpatentable over United States Patent Number 5,500,857 to Nakata, and further in view of United States Patent Number 5,572,612 to Delavaux et al.

As to claims 1, 3, 6, 19, 27-32, 51, 55, 58-60, 63-64, 69, 74-82, and 84-85, Nakata discloses a bi-directional optical transport system comprising:

- A light transmission line (including a bi-directional bus architecture) for transmitting light bi-directionally (Column 5, lines 35-37);
- As to claims 19-20, a fiber optical bus is used (column 10, line 9);
- A plurality of nodes, connected in series by the light transmission line for receiving, extracting, and passing signal light (column 2, line 59), each node comprising:
 - Data terminal equipment for issuing and receiving an electrical signal (column 5, lines 5-21);
 - An electro-optical interface device, associated with the data terminal equipment, for converting electrical signals issued by the associated data terminal to signal light for insertion onto the light transmission line and for converting signal light, extracted from the light transmission line into electrical signals to be received by the associated data terminal (column 5, lines 5-21);
 - A translation logic device connected between the electrical optical interface device and the data terminal equipment for performing required protocol translation for the data terminal equipment (column 6, line 44);

- An optical interface device (5, figure 5), connected to the electro-optical interface device and the light transmission line, for extracting signal light from the light transmission line to be converted into electrical signals by the electro-optical interface device for receipt by the data terminal equipment, for inserting, onto the light transmission line, signal light received from the electro-optical interface device and for passing signal light bi-directionally on the light transmission line (column 5, lines 5-21);

However, Nakata fails to explicitly disclose an optical fiber amplifier and pump source doped with a material that is excited by excitation light and emits light having the same wavelength as the light signals when radiated with light signals transmitted bi-directionally by the fiber optic line.

Delavaux et al. teaches the use of Erbium doped fiber amplifiers with a pump source comprising a laser for use in a bi-directional optical transmission system in order to reduce costs, complexity and to maintain an optical signal that spans long distances with minimal errors (column 1, lines 20-37 and column 3, line 2).

Since Nakata and Delavaux et al. are both from the same field of endeavor, the purpose disclosed by Delavaux et al. to maintain optical signals through long distances would have been recognized in the pertinent art of Nakata.

It would have been obvious to one having ordinary skill at the time the invention was made to a person having ordinary skill in the art to use the Erbium doped fiber amplifier of Delavaux et al. in Nakata for the purpose of reducing costs, equipment, and to maintain optical signal integrity with minimal losses.

Art Unit: 2883

As to claims 2 and 42, Nakata discloses a system where the data terminal equipment comprises one of a computer, video or telephone device having different protocol requirements (column 2, line 58 – column 2, line 36).

As to claim 4, excitation light emitted by the pump laser has a wavelength of about 980 nanometers (column 3, lines 57-59; Delavaux et al.).

As to claim 9, couplers are used (column 5, lines 5-21).

As to claims 10 and 15, couplers (8,9) together would form a 4 port bi-directional coupler.

As to claims 13, 14 and 18, multiple light transmission lines are used.

As to claims 21-22, 53, and 68 a token ring system is used with redundancy (figure 7).

As to claims 34-36, 65-67, 71-72, a wavelength tunable filter is disclosed (column 5, lines 22-27).

As to claim 41, terminal equipment is disclosed (figure 7).

As to claim 54, the electrical-optical converter comprises a tunable laser.

As to claims 23-25, multiple optical – electrical converters are disclosed.

As to claims 26, 70 and 83, signals are routed in both directions.

As to claims 33 and 73, demand-assign wavelength-division multiplexing schemes are used.

As to claims 52, and 61-62, each node in the ring structure is a terminal workstation.

Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Nakata in view of Delavaux et al. as applied to claim 1 above.

Art Unit: 2883

Nakata in view of Delavaux et al. disclose an optical transport system that operates at various wavelengths (column 2, lines 35-40), but fails to explicitly disclose the specific wavelength of 1550 nanometers. It is noted that the 1550 nanometer wavelength is commonly known and used in the art for optical communications and incorporating this wavelength to ensure proper operation in different applications would be commonly known in the art.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use a wavelength of 1550 nanometers, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable range involves only routine skill in the art. *In re Aller*, 105 USPQ 233.

9. Claims 7-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nakata in view of Delavaux et al. as applied to claim 1 above, and further in view of United States Patent Number 4,959,837 to Fevrier et al.

Nakata in view of Delavaux et al. disclose an optical transport system with an Erbium doped and pumped amplifier, but fail to explicitly disclose the length of the optical amplifier fiber is set as a function of the amount of amplification required, namely 2 meters. It is noted that it is commonly known in the art to vary the length of a doped amplification fiber to determine the amount of gain needed for that specific application.

Fevrier et al. teaches that it is commonly known in the art to vary the length of doped amplification fiber in order to achieve specific gain values, specifically in the prior art disclosed, 2 meters in length (column 3, line 32).

Art Unit: 2883

Since Nakata, Delavaux et al. and Fevrier et al. are all from the same field of endeavor, varying the length of a doped optical amplification fiber disclosed by Fevrier et al. would have been recognized in the pertinent art of Nakata in view of Delavaux et al.

It would have been obvious to one having ordinary skill at the time the invention was made to use the method taught by Fevrier et al. to vary the length of the doped optical amplification fiber in Nakata in view of Delavaux et al. in order to minimize errors and to provide proper amplification and transmission of an optical signal.

10. Claims 37-40, 43-50 and 56-57 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nakata in view of Delavaux et al. as applied to claim 1 above.

Nakata in view of Delavaux et al. discloses a bi-directional optical transport system but fails to specifically disclose the type of signals being converted and transmitted as claimed. It is noted however, that Nakata nor Delavaux et al. specifically limits the type of signals to be used.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use specific signals as claimed, since it has been held to be within the general skill of a worker in the art to select a known type of material (signal) on the basis of its suitability for the intended use as a matter of obvious design choice. *In re Leshin*, 125 USPQ 416. It is respectfully noted that applicant has not disclosed any criticality in the usage of specific types of signals to be converted. By merely selecting from a list of signal types is a general electrical engineering practice to provide for the correct type of signal transmission and to provide compatibility between components with minimal errors. Examiner's contention of this obvious choice in design can be overcome if applicant establishes unexpected results by using a specific type of signal as claimed.

Information Disclosure Statement

The information disclosure statements (IDS) submitted on 03/29/2001, 06/30/2002, 08/26/2002, 10/09/2002, 12/02/2002, 06/30/2003, 04/26/2004, 09/07/2004, 04/07/2003, 10/12/2004, and 08/25/2003 have been considered by the examiner and made of record (note the attached copy of form PTO-1449).

Conclusion

11. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- a. United States Patent Number 5,058,974 to Mollenauer for a amplification system
- b. United States Patent Number 5,083,874 to Aida et al. for a bi-directional amplification system.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Eric Wong whose telephone number is 571-272-2363. The examiner can normally be reached on Monday through Friday, 830AM - 430PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Frank Font can be reached on 571-272-2415. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
